Full-Service Z5 Count

Complete inventory activities with minimal stress.

The Resource Problem

Inventory management cannot be handled by a small, isolated team. Annual inventory valuations and year-round activities like cycle counts, pharmacy counts, expiration sweeps, and audits pull clinical and financial staff into the orbit of the supply chain team. All of this costs each of the involved teams time and resources when they're already strained for both. Outdated technology – like paper count sheets and inflexible handheld devices – stretch the time commitment out so that the simple act of counting a shelf takes months from beginning to end.

Prep

- **Product data, previous count data, and storage area data are tedious to compile.**
- **Count sheets are often burdened with errors made and products missed last count.**
- **Preparation is so cumbersome that no time remains to provide analytics that would be useful during the count itself.**

Count

- **Staff overtime is expensive, exhausting, and distracting.**
- **Monitoring count progress remotely is almost impossible.**
- **Inaccurate records (including uncounted product) are difficult to identify mid-count.**

Post

- **Errors caused by incorrect count sheets take valuable time to correct.**
- **Entering count data is tedious and provides little actionable insight.**
- **Results are often outdated as soon as they're compiled, requiring the whole, lengthy process to start again.**
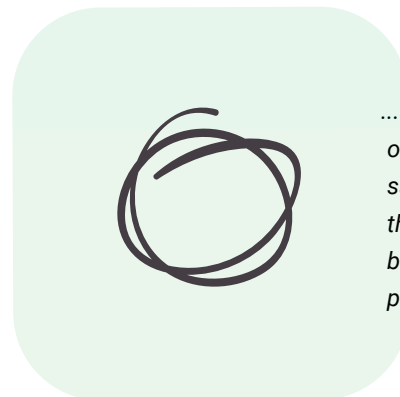

You're struggling with...

...occupying every department's time – and overtime – with tedious training, preparation, counting, and audit.

...missing mistakes early on that can linger till they skew the valuation and affect budgeting, ordering, and planning for the future.

...sticking with the same old process and all its same old inefficiencies that never get fixed because you're already pressured enough as it is.

Z5 Inventory

The Resource Solution

Rely on Z5 Inventory's team of trained medical supply and logistics experts to take care of all the work of capturing everything you have stored on every shelf. Take advantage of the staff's expertise in the uniqueness of clinical areas and perioperative supplies. Utilize a workforce that can get the work done quickly during hours that will minimally impact normal operations. And trust the advanced AI powering Z5 Inventory's software to catch variances and provide savings opportunities you can explore now that you have time.

Prep

- Use P.O. and item master upload wizards to start counting as soon as you open the software.
- Supplement your data with an industrywide product database.
- Create count sheets for each supply area as you progress through it.

Count

- Progress quickly with barcode scanning (UPC, NDC, GTIN, etc.).
- Rely on the software to flag suspicious quantities and inaccurate data.
- Monitor and edit quantity and product data from a centralized dashboard viewable by all stakeholders.

Post

- Audit in the same mobile app and dashboard you use during the count.
- Roll up data wirelessly and create reports automatically that feed into your ERP.
- Optimize inventory based on powerful AI-backed analytics.

You're taking control of...

...your time by allowing a professional team to complete the work quickly.

...your data quality by monitoring results in real time and correcting mistakes before they affect your valuation.

...your savings opportunities by freeing up enough resources to take advantage of recommendations from industry-leading logistics AI.

Z5 Inventory

Count.
Reallocate.
Save.

Make expiration avoidance part of your
everyday inventory management.

Z5 Count

Full-service or self-service SaaS to perform cycle counts, expiration sweeps, and full inventories of medical supplies and pharmacy products.

- **Customizable staffing options**, from one project manager to an entire professionally trained crew, fit every provider and facility.
- **Mobile app and portal** built on Amazon Web Services technology offers unparalleled reliability.
- **Product scanning** of all types – UPC, GTIN, and more – makes counting faster and more accurate.
- **Real-time data transfer** to a central dashboard allows full visibility for all stakeholders.
- **Inventory over inventory reporting** identifies variances down to the shelf level.
- **Instant in-app audits** reduce the delay between count and valuation.

"I spend too much of my time and budget on taking inventory, and I have no real-time visibility into the process."

Z5 Count helped one provider reach inventory valuations for all of its **31 facilities in 1 day**.

Z5 Reallocate

Full-service or self-service SaaS to identify slow and excess medical supply before expiration and recommend options to create savings for your organization.
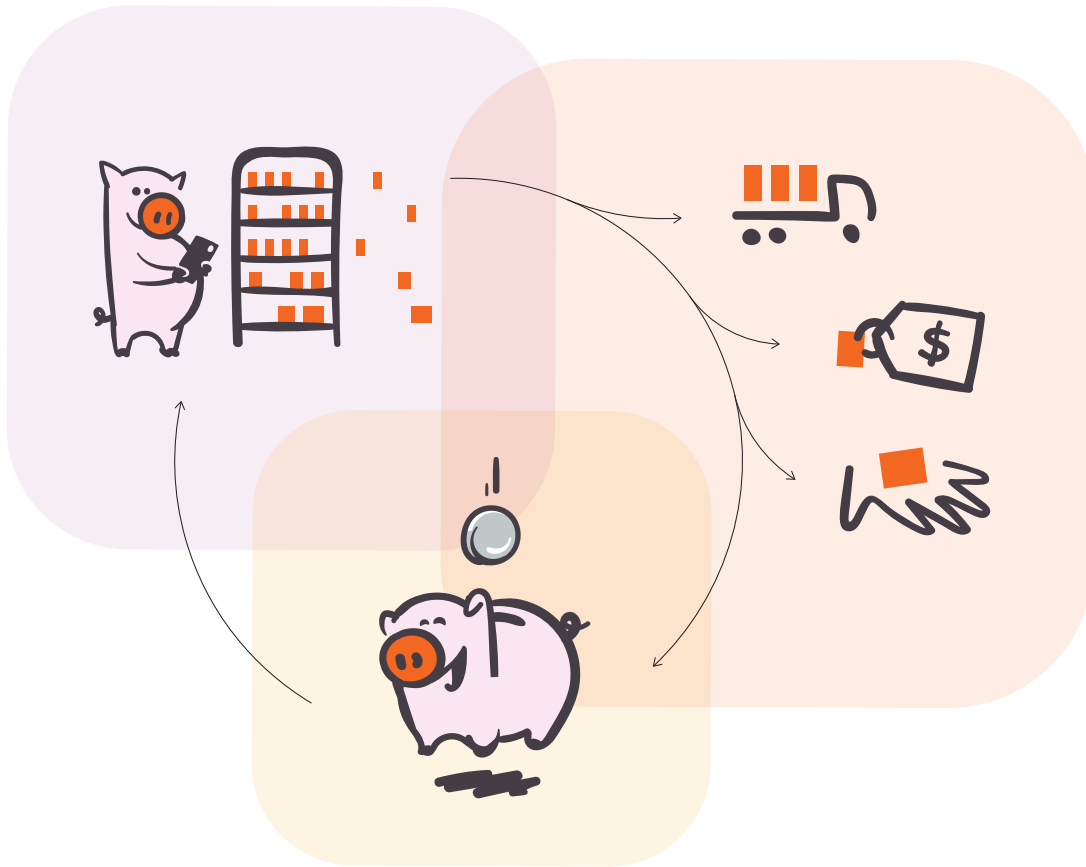

How To Maximize Savings From Slow and Excess Product:

Move product to make use of what you've already paid for.
Sell product to recover money spent, rather than throw it away.
Donate product to realize tax and PR benefits.

- **Regular inventory activities** can identify your slow and excess inventory before it expires.
- **AI-driven analytics** predict product demand within your system and industrywide to provide distribution recommendations down to the department.
- **Inventory specialists** can save your staff the trouble of negotiating the removal of the product and picking, packing, and shipping excess.
- **Centralized KPI dashboard** reports enable full tracking of remediated product.

"My facilities throw away tons of supplies every year due to expiration."

Z5 Reallocate helped one provider save more than **$16 Million** *by preventing expiration.*

Ways Z5 helps you save

You don't have to wait for your annual physical inventory to count what's on your shelves and analyze its value. Throughout the year, you can count on the app to conduct...

- **High-dollar cycle counts**
- **Expiration sweeps & proactive tracking**
- **Inventory Discovery** - in perpetual areas or everywhere

You can avoid the high cost of expiration by reallocating the medical and pharmacy inventory that you don't need, as in cases of...

- **Facility Shutdown**
- **Departmental or Warehouse Optimization**
- **Conversion & Clinician Departures**

"I need to be able to predict our savings opportunity, then report exactly how much we saved."

Z5 Inventory guarantees you will identify a savings opportunity worth more than the software costs, or the **software is free**.
